3 Bucket Warm Water

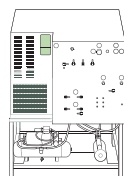

4 Blue Border Cloths

5 Cleaning Gloves

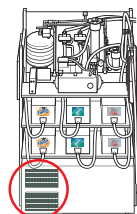

6 Fin Comb

7 Philips Screwdriver

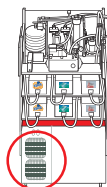

NB

Multiplex
(Rear of unit)

Whitlenge
Somerset

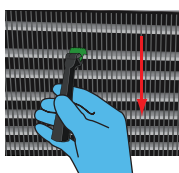

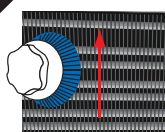

Cornelius
Apex

Identify your type of refrigeration unit. Locate the air intake fins.

1

Check for any damaged/misshapen fins, using the fin comb, straighten the fins.
NB On some Multiplex units there is a removeable grill cover. Using a Philips screwdriver remove the cover. This is taken to the backroom sinks and cleaned using the 4-step cleaning method.

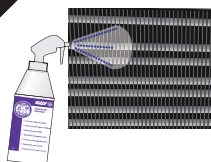

**2**

Use a dry Blue Round Brush in an upward motion to remove any debris caught between the condenser fins until clean.
NB Brush the debris/dust outwards not into the condensor fins.

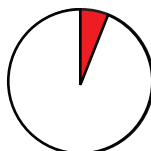

3

If further cleaning is required, due to heavy dust/debris build-up, follow **steps 4-7**.

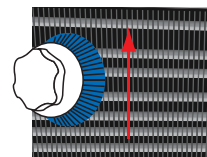

Caution: When using degreaser solution avoid spraying near electrics.

4

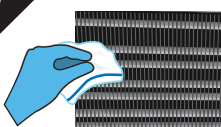

Apply Kay Heavy-Duty Degreaser by spraying onto the condenser fins.

5

Leave unit for 5 mins, allowing degreaser solution to work.

6

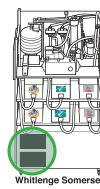

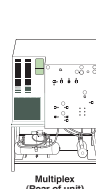

Dampen the Blue Round Brush in the bucket of warm water.
Brush the condenser fins in an upward motion until any remaining debris has been removed.
NB Brush the debris/dust outwards not into the condensor fins.

7

Lightly wipe over the condenser fins and surrounding area, using a Blue Border Cloth to remove any excess moisture.

8

NB Once cleaning is complete, replace the grill cover back onto the Multiplex unit.

9

Make sure there is always a good airflow around the Condensers and they are never blocked. Failure to do so will result in warm drinks.
