Non-Food Spillages

In the rare event of a non-food spillage, i.e. a spillage of bodily fluids such as vomit etc., the clean-up procedures are more critical than normal cleaning as the area must be considered as contaminated and a potential risk of infection. The area must be treated carefully and cleaned thoroughly to avoid bacteria and viruses being spread.

Follow these steps in any such event:

- Notify the Shift Manager immediately, who should politely deal with any customers
- Close off the affected areas wherever possible or have a responsible employee 'guard' the area to advise customers of the situation and to prevent the contamination from spreading
- Wear disposable apron and gloves and take care not to contaminate clothing or shoes
- Follow the steps overleaf to clean up the spill
- The Shift Manager must verify the safety and cleanliness of the area prior to re-opening.

If the non-food spill occurred in a food area discard any open food or packaging items that may have been exposed. Wash, rinse and sanitize all surfaces and any food equipment or utensils that may have been exposed.
